DevSecOps Engineer

Experience Summary

Dynamic and results-driven DevOps Engineer with 6 years in the field and a proven record of accomplishment of successfully leading complex automation projects and driving seamless cloud migrations. Offering a wealth of experience across diverse domains, from health insurance to supply chain management, with a focus on optimizing workflows, enhancing developer environments, and implementing innovative solutions.

Key Expertise

- Automation Solutions:** Spearheaded the creation and modification of pipelines, leveraging technologies like Azure DevOps, PowerShell, Maven, Gradle, and Git. Utilized automation to streamline processes, reduce manual intervention, and ensure consistent releases.
- Cloud Migration:** Led the migration of on-prem infrastructure to the cloud, utilizing AWS services such as EC2, S3, Lambda, and Redshift. Achieved enhanced scalability, efficiency, and resource utilization.
- Data-driven Insights:** Designed and implemented PowerBI dashboards to analyze scrum metrics and support data-driven decision-making, resulting in improved project management and performance tracking.
- Collaboration and Leadership:** Collaborated effectively with cross-functional teams, presented workflow improvements to clients, and led offshore teams. Successfully drove project milestones and maintained productive collaborations with diverse stakeholders.

Skill Sets

Area	Details
Cloud Provider	AWS, Azure DevOps, Salesforce DevOps
Config Management	Chef, Puppet, Ansible, CloudFormation, CloudTrail, Systems Manager, AWS Auto Scaling
Containerization	Docker, Docker Swarm, Elastic Container Service (ECS), Elastic Container Registry (ECR)
Automation Tools	Jenkins, CloudFormation, Copado, TOSCA Commander, Selenium
Web Servers	Apache HTTP (2x/3x), Nginx, Apache Tomcat, WebLogic
Scripting	PowerShell, Python, YAML, XML, HTML
Networking	Load Balancers, Network Switches, Route53, API Gateway, AWS App Mesh, CloudFront, VPC
Version Control	GIT, Bitbucket, GitLab
Monitoring Tools	CloudWatch, CloudTrail, CloudFormation, AWS IOT, IOT Analytics
Storage	S3, EFS, S3 Glacier
Analytics	AWS Kinesis, Glue, Glue DataBrew, RedShift
Databases	MongoDB, DynamoDB, RDS, MySQL, PostgreSQL
Migration Services	AWS Application Migration Service, Database Migration Service, DataSync
Developer Tools	CodePipeline, CodeBuild, CodeArtifact, CodeCommit, CodeDeploy, CloudShell
Machine Learning	Kinesis, Kinesis Data Firehose
Security	Identity Access and Management (IAM), Resource Access Manager, Certificate Manager

Certifications

- AWS Solutions Architect – Associate
- Azure Administrator – Associate
- Safe DevOps Practioner (SDP) – Associate

Project 1

Project Title	Automation Test Suite Migration with Reporting and Cloud Application Deployment
Client	Ally Inc.
Job Title	Senior DevOps Engineer/ Jr. Site Reliability Engineer
Duration	6 Months
Technologies	AWS, GitLab, Docker, GitLab CI/CD, TestNG, Python, XML, HTML, Linux, Bash
Other Utilities	BitBucket, YAML, PowerShell, Postman, Apigee, Splunk, BrowserStack, DynaTrace, AppDynamics, InVision, LogRocket, ServiceNow

Description

The AAOS Test Suite Migration from BitBucket to GitLab project aimed to seamlessly transition the Automated API and Web Application test suite for the AAOS (Ally Auto Online Services) platform from BitBucket to GitLab. This migration not only involved moving the code repository but also included the setup of a modern and efficient Continuous Integration and Continuous Deployment (CI/CD) pipeline using GitLab's powerful capabilities.

Roles and Responsibilities

- Led the migration project from BitBucket to GitLab for the AAOS Test Suite.
- Collaborated with the team to define the migration strategy, timeline, and goals.
- Designed and implemented the GitLab CI/CD pipeline for the AAOS Test Suite, ensuring smooth integration, testing, and deployment processes.
- Configured pipeline stages for building, testing, scanning, reporting, and notifying stakeholders.
- Utilized Docker for containerization, improving consistency and reproducibility across environments.
- Integrated secure email notifications using Python scripts and third-party libraries.
- Managed cache settings to optimize build times by using cached dependencies.
- Developed custom scripts for parsing XML test results, generating HTML reports, and emailing notifications.
- Ensured test cases were accurately migrated from BitBucket to GitLab.
- Collaborated with the DevOps team to integrate the TestNG suite into the GitLab CI/CD pipeline.
- Contributed to the development of custom reporting scripts to visualize test results effectively.
- Provided support in setting up GitLab repositories and configuring access controls.
- Collaborated with the DevOps team to ensure the GitLab environment was properly provisioned and aligned with the project requirements.
- Aided in managing GitLab Runner instances, ensuring they were correctly tagged and distributed across different environments.
- Reviewed the GitLab configuration to ensure that security best practices were implemented.
- Collaborated with the team to ensure secure handling of credentials and sensitive data.
- Ensured proper network configurations to mitigate potential vulnerabilities.
- Created comprehensive documentation outlining the migration plan, pipeline configuration, and scripting details.
- Documented the step-by-step process for setting up GitLab repositories, configuring CI/CD pipelines, and running tests.

- Facilitated regular team meetings to discuss progress, challenges, and potential solutions.
- Coordinated with developers, QA engineers, and other stakeholders to ensure smooth migration and adoption.
- Communicated status updates, milestones, and achievements to higher management.

Outcome

- Successfully migrated the AAOS Test Suite from BitBucket to GitLab, ensuring seamless integration with the new CI/CD pipeline.
- Improved test execution efficiency and visibility through well-designed CI/CD stages and custom reporting.
- Enhanced collaboration among cross-functional teams by streamlining communication and knowledge sharing.

Key Achievements

- Efficiently migrated a critical test suite from BitBucket to GitLab, improving maintainability and scalability.
- Developed custom Python scripts for parsing XML test results, generating HTML reports, and sending automated email notifications.
- Designed and implemented a comprehensive GitLab CI/CD pipeline, including build, test, scan, report, and notify stages.
- Collaborated with cross-functional teams to ensure a successful migration and adoption of the new pipeline.

Project 2

Project Title	Automation Solutions and Application Maintenance
Client	Humana Inc.
Role	DevOps Engineer
Duration	10 Months
Technologies	AWS, GitLab, Docker, GitLab CI/CD, TestNG, Python, XML, HTML, Linux, Bash
Other Utilities	BitBucket, YAML, PowerShell, Postman, Apigee, Splunk, BrowserStack, DynaTrace, AppDynamics, InVision, LogRocket, ServiceNow

Description

Led automation solutions and application maintenance for Humana Inc., a prominent health insurance company. As a DevOps Engineer, I designed and executed efficient pipelines, collected crucial metrics, and enhanced release patterns.

Roles and Responsibilities

- Created and customized pipelines, ensuring seamless Build and Release Pipelines as per requirements.
- Gathered KPI (Key Performance Indicators) and KHI metrics, enabling data-driven insights at the end of each cycle.
- Introduced and documented novel release patterns, including Canary deployments.
- Spearheaded quarterly and monthly milestones, ensuring project alignment with business goals.
- Developed a PowerBI dashboard for scrum metric analysis by integrating Azure DevOps and qTest, driving informed decisions.
- Conducted regular maintenance of Test and QA infrastructure, ensuring optimal system performance.
- Leveraged PowerShell scripting for task automation, such as retrieving Rest API data and recording it for future use.

Outcome and Key Achievements

- Successfully maintained robust automation pipelines, reducing manual intervention, and enhancing efficiency.
- Improved decision-making with data-backed insights from the PowerBI dashboard.
- Enhanced overall workflow efficiency by identifying and implementing improvements.
- Streamlined system maintenance, reducing downtime, and optimizing resource utilization.

Project 3

Project Title	Program-wide Scrum Dashboard Integration
Client	Humana Inc.
Role	DevOps Engineer
Duration	6 Months
Technologies	AWS, GitLab, Docker, GitLab CI/CD, TestNG, Python, XML, HTML, Linux, Bash
Other Utilities	BitBucket, YAML, PowerShell, Postman, Apigee, Splunk, BrowserStack, DynaTrace, AppDynamics, InVision, LogRocket, ServiceNow

Description

As a DevOps Engineer, I led the creation of an integrated Scrum dashboard using PowerBI, Azure DevOps, and qTest, enabling comprehensive program-wide data visualization.

Roles and Responsibilities

- Solely developed a Proof of Concept (POC) for a program-wide Scrum dashboard, integrating key metrics such as Team Velocity, Team Burndown, Cumulative Distribution Progress etc.
- Linked PowerBI, Azure DevOps, and qTest through Selenium WebDriver and Java, updating test data daily.
- Utilized PowerShell scripting for Azure DevOps integration and Power Query for data transfer.
- Integrated qTest with PowerBI for testing data using Selenium Server, Java, and Windows Scheduler.

Outcome and Key Achievements

- Successfully demonstrated the feasibility of the program-wide Scrum dashboard through the POC.
- Enabled program-wide visibility into key metrics, aiding decision-making, and tracking progress.
- Improved data integrity by automating data updates and integration between tools.

Project 4

Project Title	Salesforce Copado DevOps Implementation
Client	Humana Inc.
Role	Offshore Lead DevOps Engineer
Duration	6 Months
Technologies	AWS, GitLab, Docker, GitLab CI/CD, TestNG, Python, XML, HTML, Linux, Bash
Other Utilities	BitBucket, YAML, PowerShell, Postman, Apigee, Splunk, BrowserStack, DynaTrace, AppDynamics, InVision, LogRocket, ServiceNow

Description

As the DevOps Offshore Lead Engineer, I oversaw the implementation of Copado for Salesforce DevOps solutions, ensuring smooth data accuracy, maintenance, and production releases.

Roles and Responsibilities

- Managed daily back promotions using Copado, minimizing disruptions between environments.
- Collaborated with developers to promote stories effectively and resolve conflicts.
- Designed procedures for DevOps pipelines, enhancing collaboration and reducing conflicts.
- Automated processes between TOSCA Commander, Azure Pipelines, and Copado pipelines.
- Set up automation between Selenium, Azure Pipelines, and Copado Pipelines.

- Led the offshore team and played a pivotal role in monthly production deployments.

Outcome and Key Achievements

- Achieved streamlined Salesforce DevOps processes with Copado, minimizing data inaccuracies.
- Improved collaboration between teams, reducing merge conflicts and enhancing deployment efficiency.
- Successfully led the offshore team and contributed to monthly production deployments.

Project 5

Project Title	Migration from On-Prem to Cloud
Client	Coyote Logistics
Role	Associate DevOps Engineer
Duration	3 Years
Technologies	AWS, EC2, EFS, S3, IAM, Lambda, EC2 Image Builder, AWS Batch, ECS, AWS Budgets, Cost Explorer, Amazon SQS and SNS, AWS Glue DataBrew, Kinesis, Redshift, Amazon Simple Email Service, RDS and DynamoDB, CodeArtifact, CodeBuild, CodeCommit, CodeDeploy, CodePipeline, CloudFormation, CloudTrail, AWS Application Migration Services, Database Migration Service, AWS App Mesh, API Gateway, Route 53, VPC

Description

Spearheaded a transformative three-year migration project at Coyote Logistics, a leading Supply Chain Management company. Successfully transitioned the on-premises infrastructure to a dynamic cloud environment, significantly enhancing efficiency, scalability, and developer tool accessibility.

Roles and Responsibilities

- Analyzed network data using AWS services like CloudWatch, Elastic Beanstalk, CloudFormation, and CloudTrail to optimize network usage and resource allocation.
- Configured and supported LAN and WAN components, including hubs, routers, switches, and controllers, ensuring seamless connectivity.
- Leveraged AWS Route 53 and API Gateway to establish and manage wireless networking equipment, enhancing network stability.
- Conducted routine maintenance and error testing for networking components using AWS App Mesh, ensuring reliable performance.
- Provisioned developers with essential tools for smoother SDLC, utilizing CodeCommit, CodeArtifact, CodeBuild, and CodeDeploy.
- Implemented auto-scaling strategies with proper thresholds to dynamically adjust resources based on demand surges, boosting efficiency.
- Designed and set up a service dashboard using AWS Cost Explorer and AWS Budgets, enabling cost-benefit analysis for future workloads.
- Created a serverless application repository, streamlining deployment and publication of serverless applications for middleware API.
- Employed Redshift for data analytics, establishing nodes in various zones for real-time insights using Kinesis Data Firehose.
- Orchestrated a phased migration strategy, from assessment to optimization, ensuring a comprehensive and effective transition.
- Collaborated in a two-person team to build and validate critical architecture elements, performing rigorous cloud testing.
- Migrated file servers, RDBMS, and MySQL to their AWS equivalents, ensuring data integrity and minimal disruption.
- Successfully migrated to the Legacy Bazooka App, building cloud-aware code layers, and creating AMIs for essential components.
- Automated resource elasticity, scalability, and availability using various AWS services across multiple availability zones.
- Optimized resource utilization through advanced monitoring services, enhancing overall efficiency and telemetry.

Outcome and Key Achievements

- Seamlessly transitioned on-prem infrastructure to the cloud over three years, enhancing scalability and agility.
- Improved developer efficiency by provisioning essential tools and optimizing SDLC workflows.
- Implemented auto-scaling strategies that dynamically adjust resources based on demand, resulting in cost savings and improved performance.
- Enabled efficient cost analysis through a service dashboard, ensuring optimal resource allocation for future workloads.
- Created a serverless application repository, streamlining application deployment and reducing development cycle time.
- Leveraged Redshift and Kinesis for real-time data analysis, providing actionable insights for strategic decision-making.
- Orchestrated a successful phased migration strategy, mitigating risks and ensuring a smooth transition.
- Validated critical architecture elements through a well-executed Proof of Concept (POC), ensuring the project's feasibility.
- Achieved successful migration of file servers and databases, minimizing downtime and data loss.
- Automated resource management, achieving higher availability and scalability, contributing to a more resilient cloud environment.
- Optimized resource utilization through advanced monitoring and telemetry, resulting in enhanced operational efficiency.
